Optional available with SC 201

Control unit for Smoke-Control Curtain SC 201

Safer, light and good value cost, smoke resistant separator, max. size w= 7m, h= 4,5m

Effertz Smoke-control Curtain SC 201 was designed to supplement the proven Effertz smoke control sectional door. This product has been tested to comply with DIN 18095 and DIN EN 1634-3. It guarantees a smoke control separation, and protects lives and valuables in an emergency situation. Manufactured from a special very light material, which is less than 1 mm in thickness, there is very little demand on the structure of the surrounding building.

Thanks to a battery supported control unit the SC 201 smoke control curtain maintains all safety related functions. The advantages of this system are safety that has been tested to standard, low space requirement, maximum freedom of design and low costs. This smoke-control curtain utilizes Effertz technique of inflatable sealings, which has been working reliable for more than ten years in the Eurotunnel shuttle-waggons (tunnel connecting Great Britain and France).
